

THE INFRASTRUCTURE ARCHITECT

EUROPEAN EDITION · MONTHLY OBSERVATIONS ON CONTROL, DEPENDENCY AND CONTINUITY

REPORT · SEPTEMBER 2026 · EDITION 26-09

CENTRAL OBSERVATION Europe is turning resilience into measurable operating obligations.

Four confirmed September developments with capability, sector and decision impact.

1 Product incidents become a reporting chain

ENISA · 11 SEP 2026 · SOURCE 1

FACT	CRA reporting is live. Manufacturers must report actively exploited vulnerabilities and severe product security incidents through the Single Reporting Platform. Core product requirements follow on 11 December 2027.
IMPACT	Infrastructure owners need a reliable link from supplier notice to product version, affected service, mitigation and evidence.
DECISION	Review supplier notification clauses, asset provenance, version data and the route from notice to service response.

2 Data centres become measurable energy actors

EUROPEAN COMMISSION · 21 SEP 2026 · SOURCE 2

FACT	The Commission proposed a common rating scheme for data centres above 500 kW, covering energy, water and contribution to the grid. Parliamentary and Council scrutiny now runs for two months.
IMPACT	Hosting choices gain comparable operational measures beyond location, capacity and price. Grid flexibility becomes part of infrastructure context.
DECISION	Revisit hosting evidence, procurement criteria and capacity roadmaps. The proposal is not yet in force.

3 Dependencies are now the threat pattern

ENISA · 22 SEP 2026 · SOURCE 3

FACT	ENISA reports that 73% of targeted organisations were NIS2 essential or important entities. Public administration represented 32% of cases; ransomware remained the most impactful short term incident type.
IMPACT	Shared identity, network, DNS, cloud and management functions must be treated as concentration points, including degraded operation and recovery.
DECISION	Recheck denial of service scenarios, independent management access, emergency rights and recovery tests across suppliers.

4 Crypto agility moves from principle to roadmap

EUROPEAN COMMISSION · 2 SEP 2026 · SOURCE 4

FACT	Feedback on the EU post quantum roadmap highlighted timelines, milestones, risk based migration, hybrid approaches and crypto agility. A new FAQ clarifies risk, priorities and national roadmaps.
IMPACT	Long lived infrastructure needs visibility of cryptographic dependencies and a supported route to replace algorithms and keys.
DECISION	Add crypto inventory and migration dependencies to lifecycle roadmaps before timelines become binding locally.

DECISION AGENDA

ACT NOW	ASSESS	WATCH	TRIGGER
Connect CRA supplier notices to asset inventory, service ownership and incident handling.	Baseline hosting evidence, crypto dependencies and shared denial of service exposure.	Rating scheme scrutiny, performance standards and national post quantum roadmaps.	Update when a new shared reporting, hosting or crypto migration capability is required.

SECTOR IMPACT

Material impact in this edition

PUBLIC SECTORDIRECT

Most targeted sector in the ENISA dataset. Supplier notices and service continuity meet in one chain.

FINANCIALDIRECT

Crypto migration and supplier signals intersect with regulated operational resilience.

HEALTHCAREDIRECT

Ransomware impact and connected products reinforce lifecycle and recovery dependencies.

ENERGYDIRECT

Data centre growth is now linked explicitly to grid flexibility and resource evidence.

LOGISTICSDIRECT

Transport represented 8% of targets. Shared connectivity and control functions remain key dependencies.

SUPPLIERSDIRECT

CRA reporting makes product identity, version, notification and remediation operational duties.
